## DETAILED ACTION

### *Specification*

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of Tamney et al. APA is the apparatus discussed on the first two pages of the specification. This apparatus includes a wood chipper having a powered feed system, a powered cutting system, an infeed chute and a safety system. Apparently some safety systems are difficult to use. Tamney et al solves this problem by disclosing similar apparatus including the use of an elongated bar as part of a safety system. In order to provide for an easy to use safety system, it would have been obvious for one of ordinary skill in the art to modify APA by locating an elongated bar adjacent the feed chute as part of a safety system for the chipper, taught to be desirable by Tamney et al. The remaining limitations would then have been obvious modifications by one of ordinary skill in the art since they would be design choices,

elements known in the art, or solve no stated problems. For example, providing reversible means for the chipper is well known in the art and of no patentable merit. In response to this action, applicant should particularly point out the features that are seen to be as allowable over the art of record. Note that 'elongated structure' can read on almost any structure whatsoever i.e. elongated when compared to what?
